Water use for agriculture accounts for 70-90% of water extraction.

On average, each of us uses 700 times more water in the food we eat than what we drink.
Why focus on water productivity for agriculture?

- 2 - 5 litres daily
- 20 – 500 litres daily
- 500 - 3000 litres of evapotranspiration per kilogram
- 2000 litres daily – vegetarian diet
- 5000 litres daily – grain fed meat diet
Can we meet global food requirements in 2025 with the present use of water?

Yes: Green
Not sure: Yellow
No: Red
